Bermuda Marine Forecast

This forecast covers an area out to 25 nautical miles from the coastline

Issued at 5:30 am - Wednesday, June 08, 2016

The next scheduled update will be issued at 11:30 am

Small Craft Warning (Valid for This morning through Thursday morning)

Thunderstorm Advisory (Valid for This afternoon through Tonight)

Marine Synopsis - As a frontal boundary approaches from the west today, winds remain strong with gale force gusts and building rough seas. Showers develop this morning, increasing coverage by this afternoon with a risk of thunder into tonight. Conditions begin to improve Thursday morning as the front passes. High pressure builds in Thursday afternoon with mainly moderate winds and seas persisting into the weekend.

Today - Winds southwesterly 25 to 30 knots gusts to 45 knots... Isolated to scattered showers with a risk of thunder by afternoon and fair to poor visibility. Building southwesterly to westerly swells... Seas inside the reef 2 to 4 ft... Outside the reef 7 to 12 ft... Sunrise: 6:11 am.

Tonight - Winds southwesterly 25 to 30 knots gusts to 45 knots, decreasing 15 to 25 knots gusts 35 knots during the evening, veering westerly overnight... Scattered showers with a risk of thunder and fair to poor visibility. Decaying west-southwesterly swells overnight... Seas inside the reef 2 to 3 ft... Outside the reef 6 to 10 ft... Sunset: 8:25 pm.

Thursday - Winds westerly 15 to 25 knots, decreasing west-northwesterly 8 to 12 knots during the morning, veering northwesterly during the afternoon... Isolated to scattered morning showers with fair to poor visibility... Seas inside the reef 2 to 3 ft... Outside the reef 5 to 9 ft, decreasing during the morning inside the reef 1 to 3 ft... Outside the reef 5 to 8 ft... Sunrise: 6:11 am; Sunset: 8:25 pm.

Friday - Winds northwesterly 8 to 12 knots, backing west-northwesterly and increasing 10 to 15 knots by afternoon... Seas inside the reef 1 to 2 ft... Outside the reef 3 to 6 ft, decreasing... Sunrise: 6:11 am; Sunset: 8:26 pm.

Bradley forecast 6/7

6/7 - overnight - Winds S at 20 increasing to 30 Seas 6 to 10 ft.

6/8 - morning winds SSW 30 frontal passage associated with TS Colin brings rain squalls mid morning and wind shift to WSW at 30 to 35 -- winds diminish 20 to 25 around 21Z (5 PM EDT)

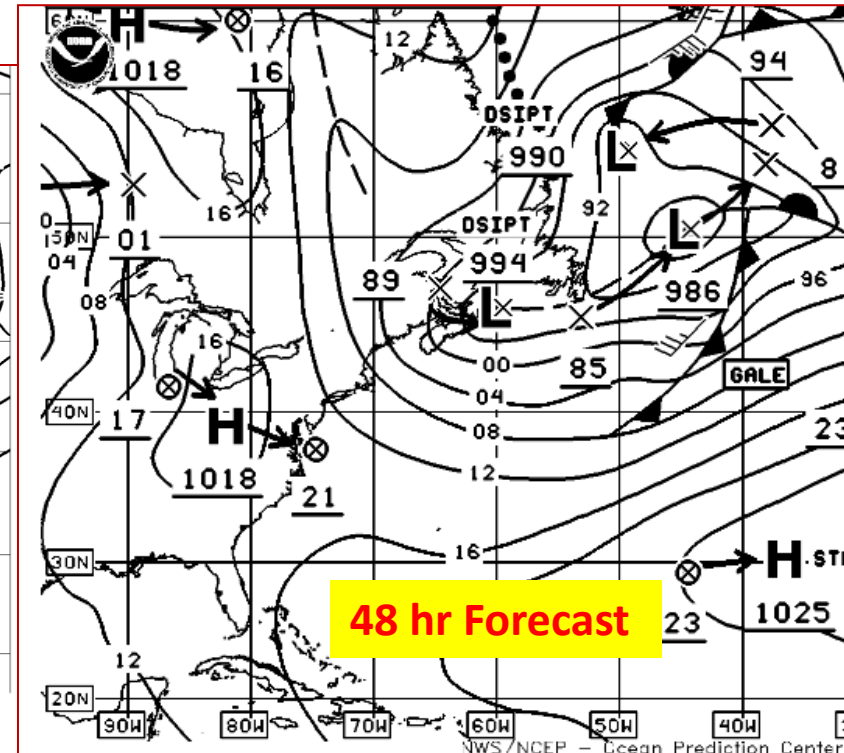

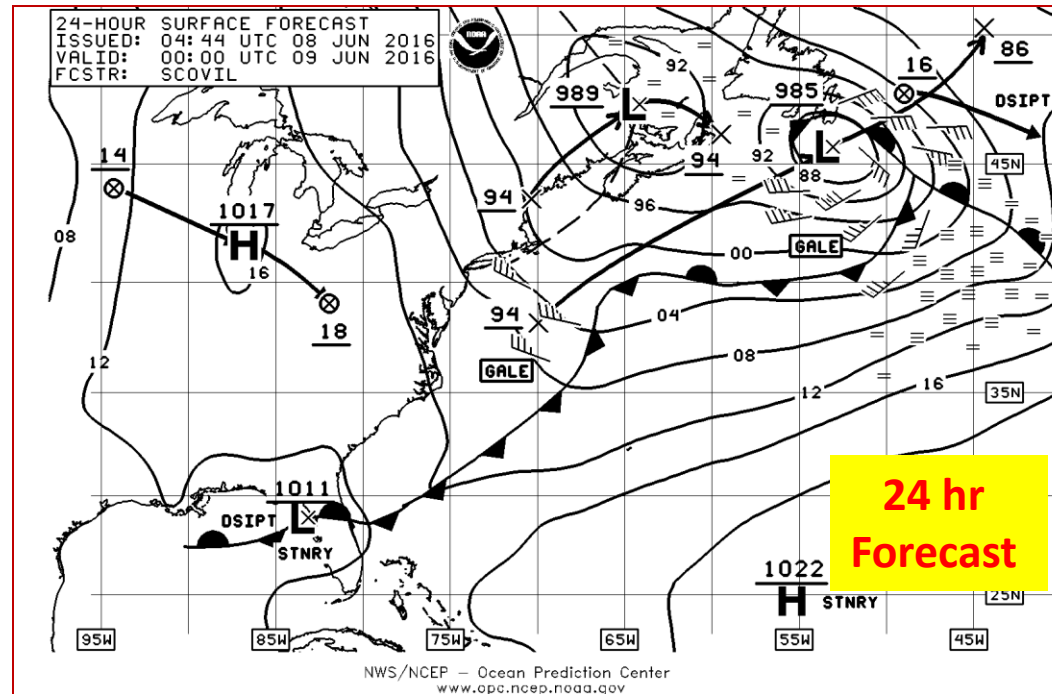

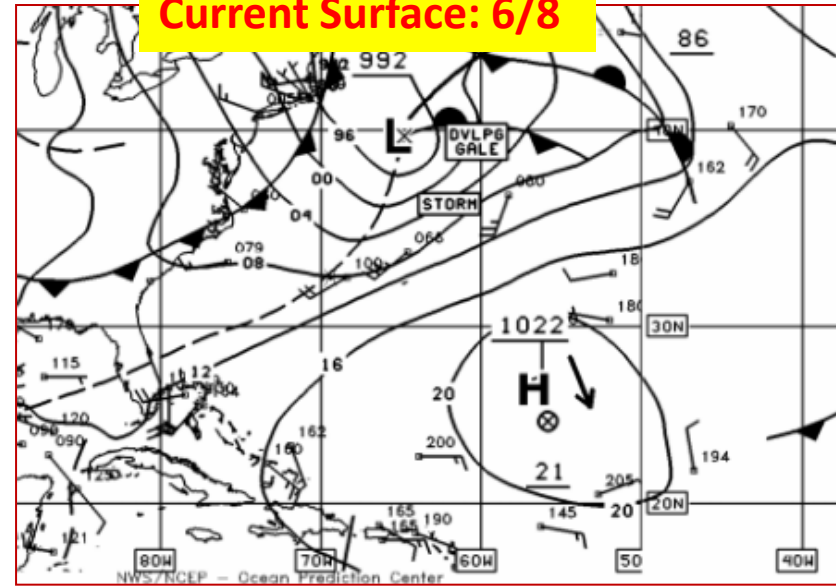

overnight winds variable S to WSW at 20 to 30 Seas 5 to 9 ft

6/9 - Morning winds variable S to W at 15 to 20 becoming W 15 to 20 Seas 4 to 8

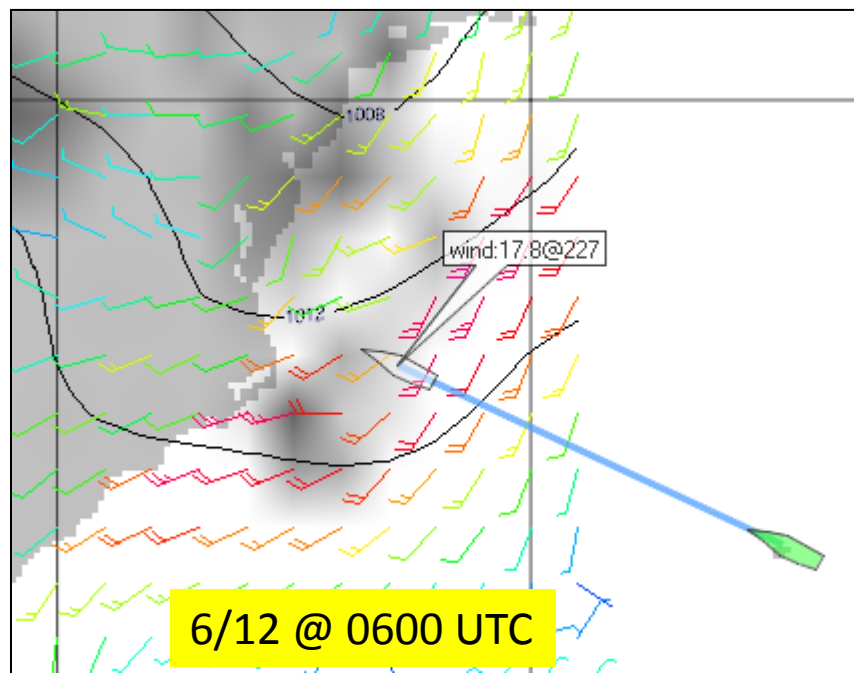

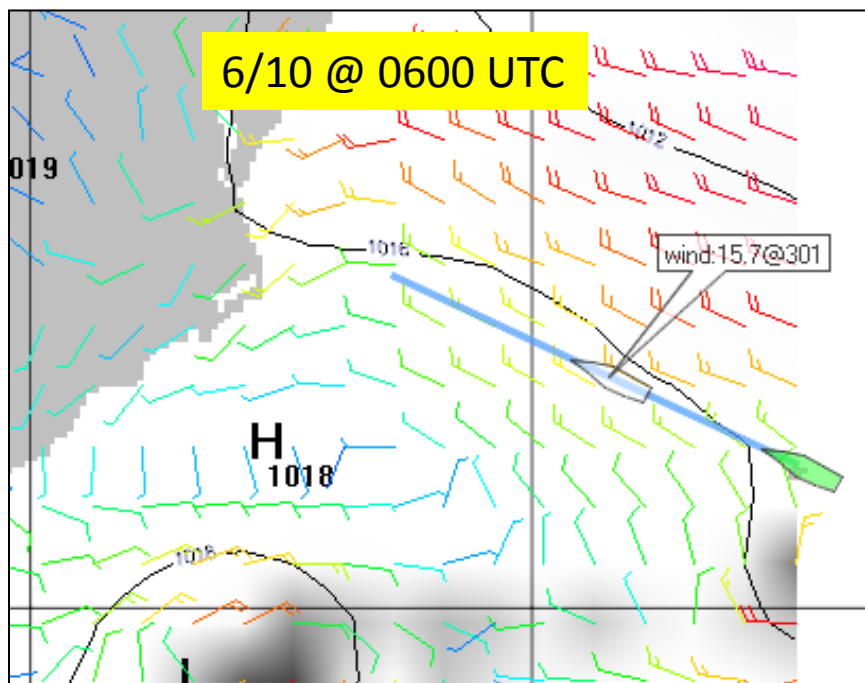

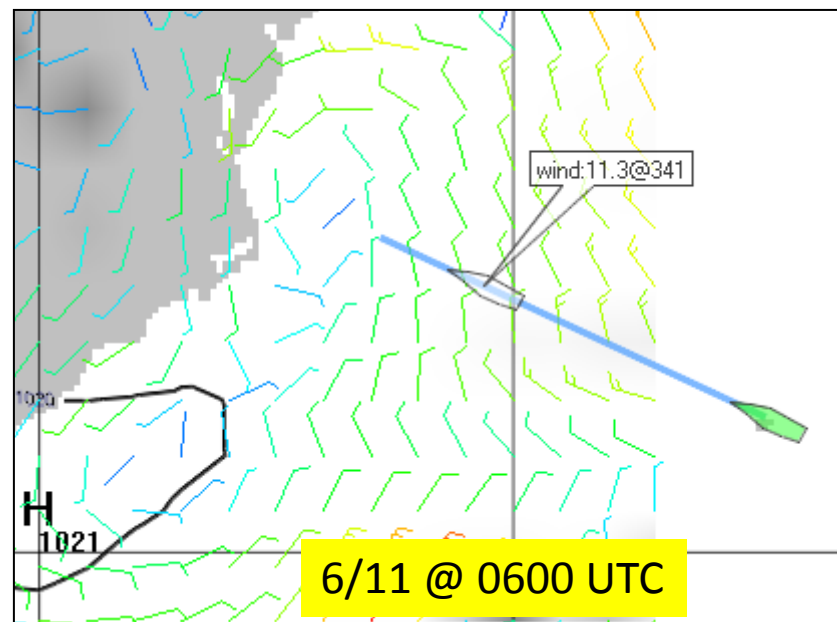

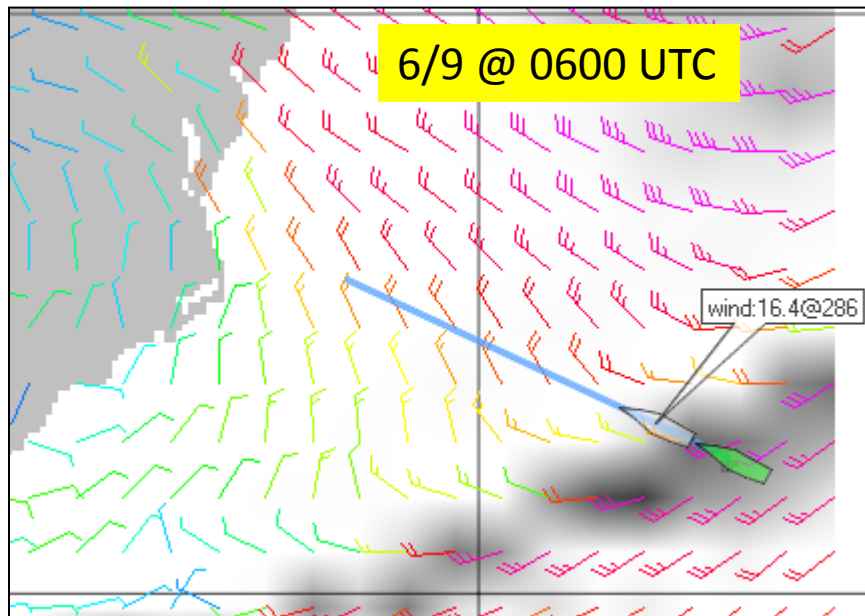

TS Colin 5 PM position 36.5 N 72.2 W Movement NE at 40
expect continued movement NE at 30 to 40 - strong Low pressure in the Canadian Maritimes will aid in continued course & speed. Winds 60 - We DO NOT anticipate any strengthening of this storm.

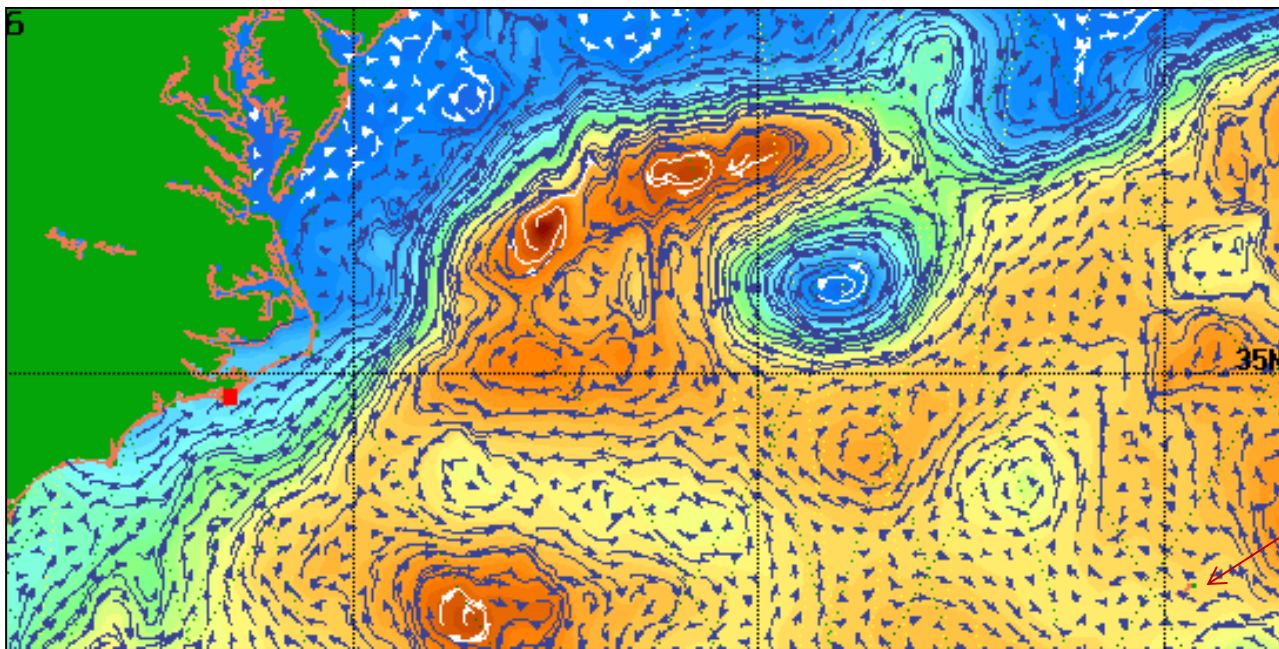

So far everything is clear behind TS Colin . High pressure moving in from W
Sea state may be choppy in the wake of this storm

Current Surface: 6/8

Bermuda Marine Forecast

This forecast covers an area out to 25 nautical miles from the coastline

Issued at 11:30 am - Thursday, June 09, 2016

The next scheduled update will be issued at 4:30 pm

Marine Synopsis - A frontal boundary will remain to our south, as weak high pressure builds from the west. This will provide fair weather on light to moderate northwesterly flow through Friday and the weekend ahead. Winds will strengthen late Sunday night through Monday, as another frontal trough passes to our north. Moderate seas continue to abate until Monday.

Today - Winds northwesterly 8 to 12 knots, easing light from the north for a brief period early this afternoon.... Seas inside the reef 1 to 3 ft... Outside the reef 5 to 8 ft... Sunrise: 6:11 am.

Tonight - Winds northwesterly 8 to 12 knots... Seas inside the reef 1 to 2 ft... Outside the reef 4 to 7 ft... Sunset: 8:25 pm.

Friday - Winds northwesterly 5 to 10 knots, increasing 10 to 15 knots during the night... Seas inside the reef 1 to 2 ft... Outside the reef 4 to 7 ft, decreasing inside the reef 1 to 2 ft... Outside the reef 3 to 6 ft... Sunrise: 6:11 am; Sunset: 8:26 pm.

Saturday - Winds northwesterly 10 to 15 knots, backing westerly 5 to 10 knots overnight... Seas inside the reef 1 to 2 ft... Outside the reef 3 to 6 ft... Sunrise: 6:11 am; Sunset: 8:26 pm.

Bradley forecast 6/8

6/8 - evening Winds SSW at 15 to 20 increasing to 30 --

overnight wind shifts W at 25 to 30

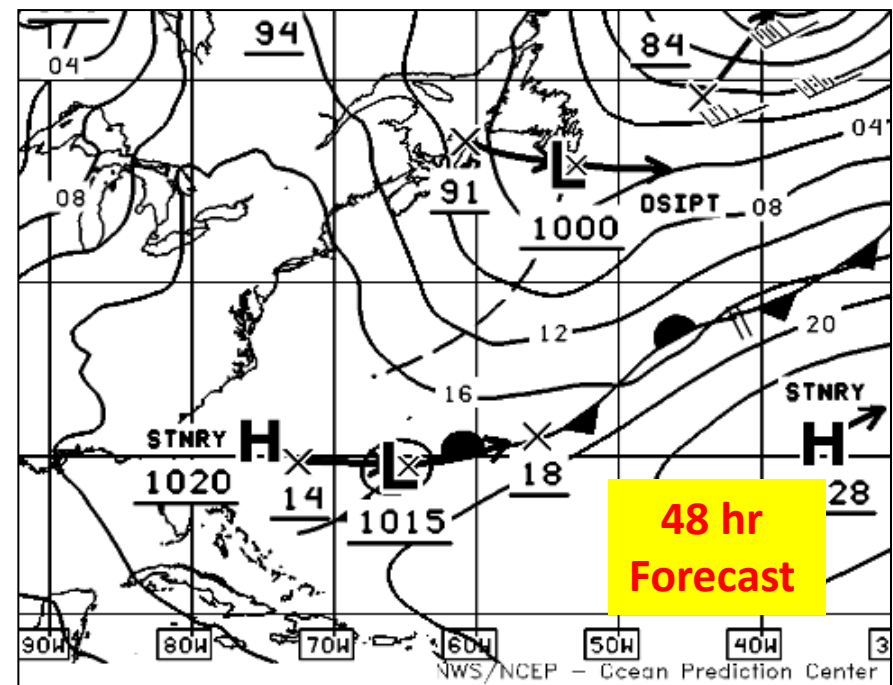

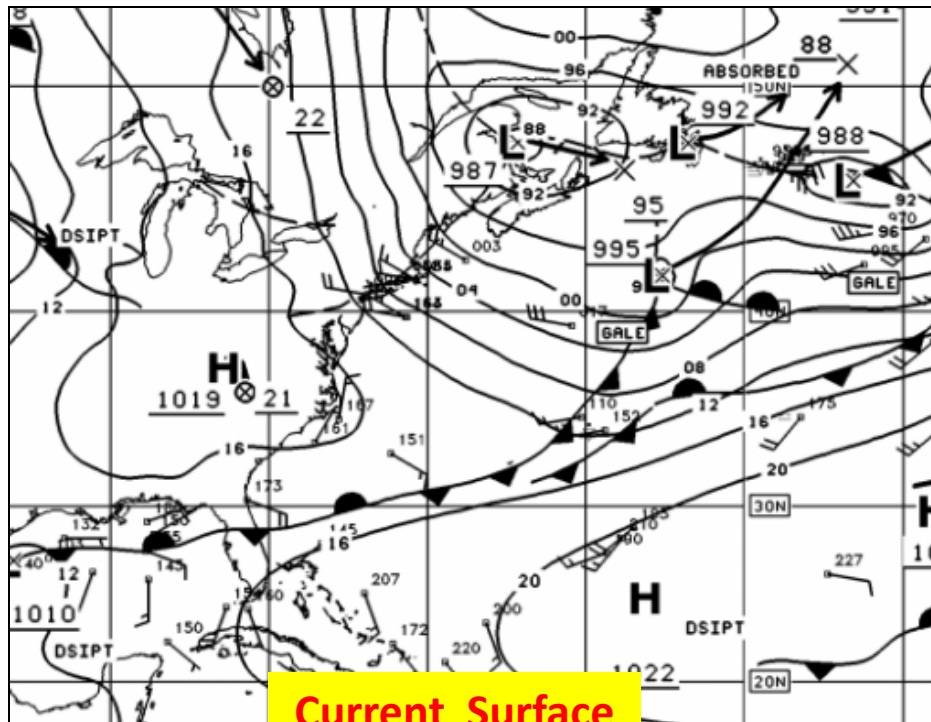

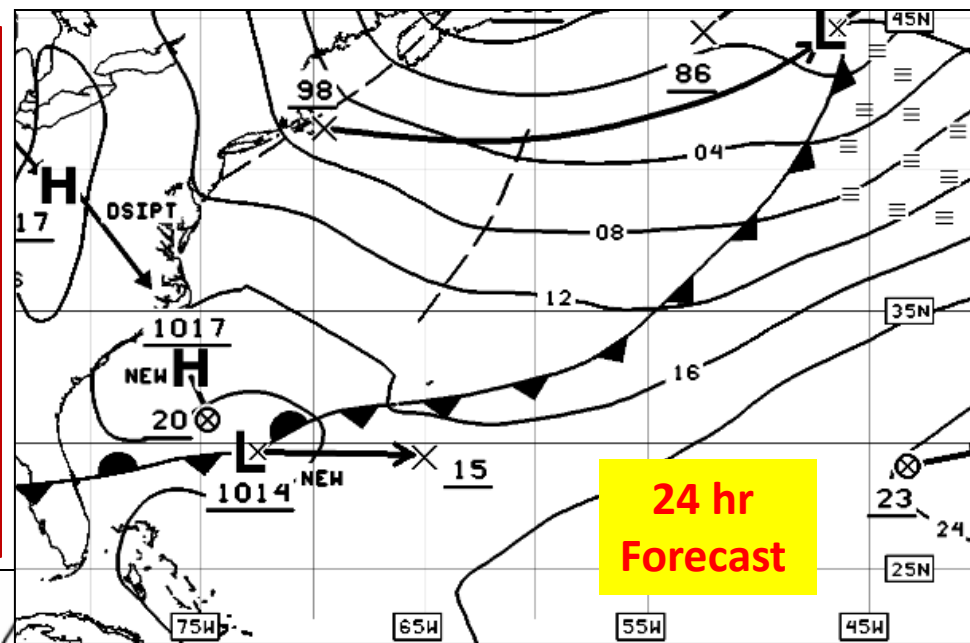

6/9 - winds diminish and become W to NW at 10 to 15 some variability depending on position Waves 7 to 9 diminishing to 5 to 7

6/10 - winds continue W to NW 10 to 15 through the day --

overnight WNW 15 to 20 waves 4 to 6

6/11 - Winds NW 5 to 10 Waves 4 to 6

Tropical - small disturbance on the W tip of Cuba shows very small chance of becoming organized - no danger anticipated

Bradley Mabe: 6/9

6/9 Evening - Winds WSW 10 to 15 becoming W overnight Waves 4 to 6
6/10 Winds veering WSW 10 to 15 Some variability W to WSW through the day & evening Waves 4 to 6

6/11 Winds becoming NW at 10 to 15 as high pressure moves into your SW Waves 3 to 5

6/11 Evening - Winds NNW 5 to 10 Wind becomes lighter and variable overnight shifting back WNW

No tropical cyclone activity expected

Bradley Mabe: 8/10 @1800

6/10 - evening - Wind WNW 10 to 15 wind is more N the further S you go - your present coarse indicated by spot is just N of a shortwave trough

6/10 - overnight - Wind becomes NW at 8 to 10

6/11 - Wind becomes N at 5 to 10 as a high pressure system begins to influence your area. Wind becomes lighter and more variable later in the day, becoming NNW at 5 to 10 overnight

6/12 - Early Morning winds become W for a few hours, then become SW at 15 to 20 increasing to 20 to 25 in the evening

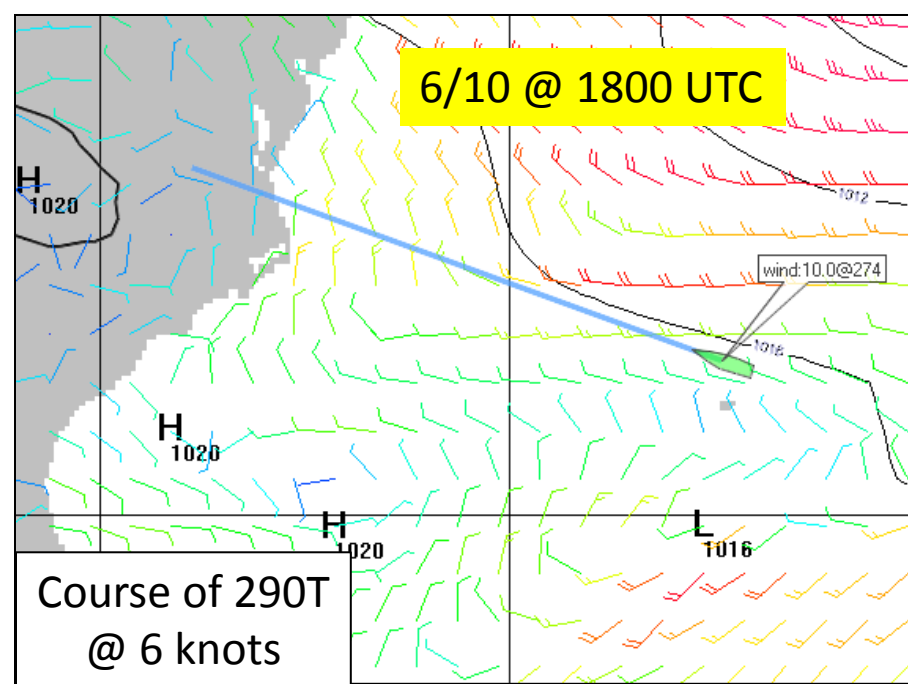

6/13 - Morning Winds SW 15 to 20 - a frontal passage brings increased chance of rain and a possible wind shift WNW this is W and N of 36N 69W

6/13 Evening - Winds NW 10 to 15

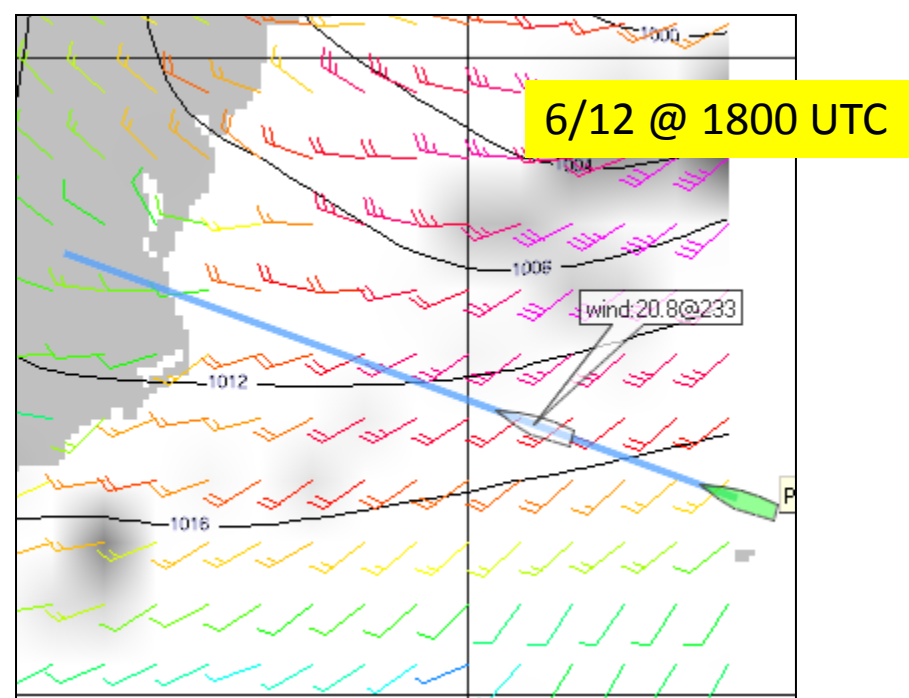

6/10 @1930

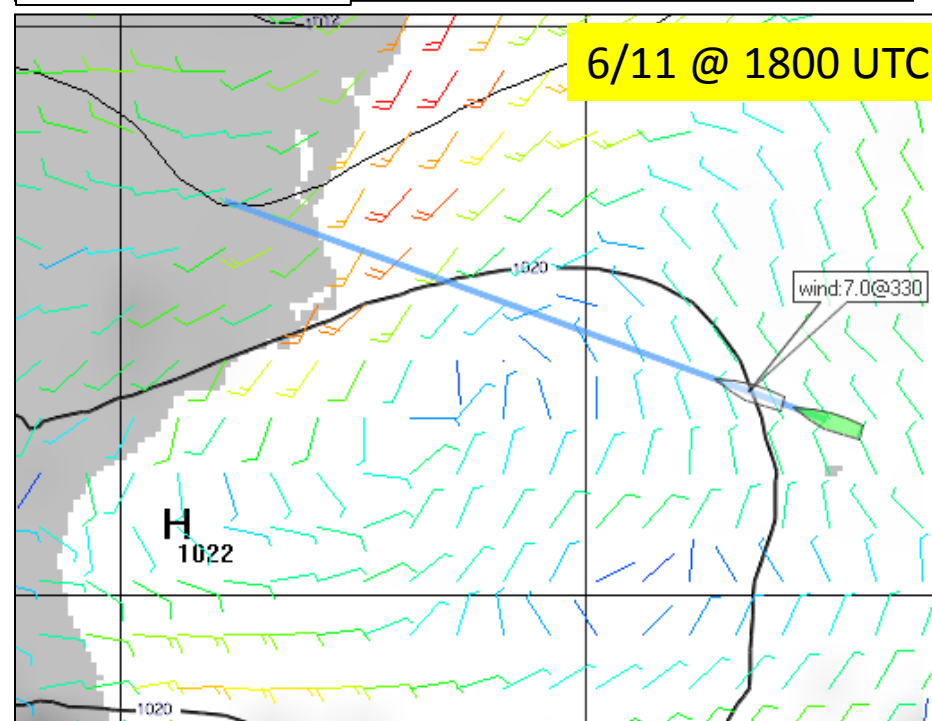

6/10 @ 1800 UTC

6/11 @ 1800 UTC

6/13 @ 1800 UTC

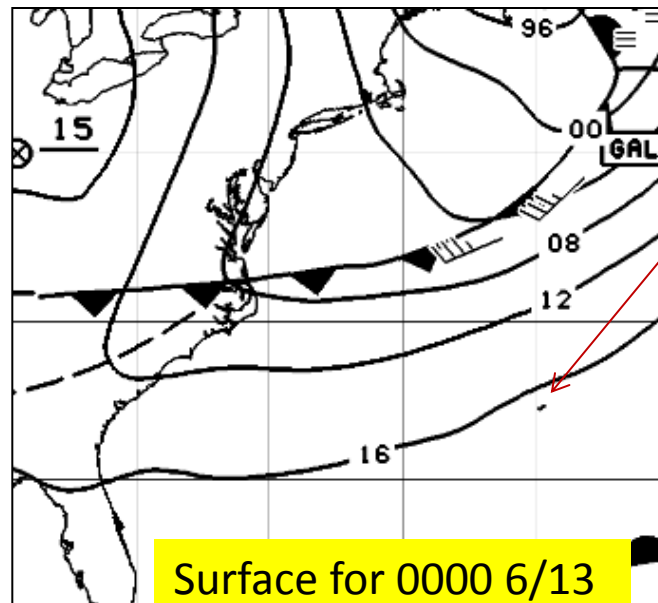

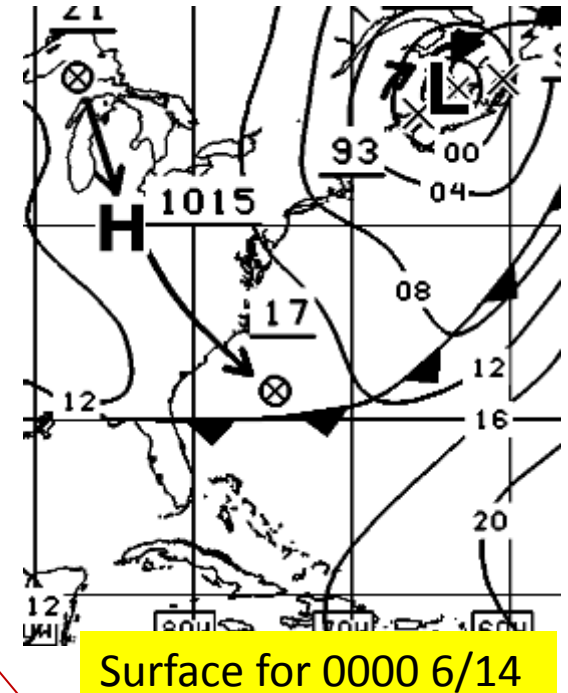

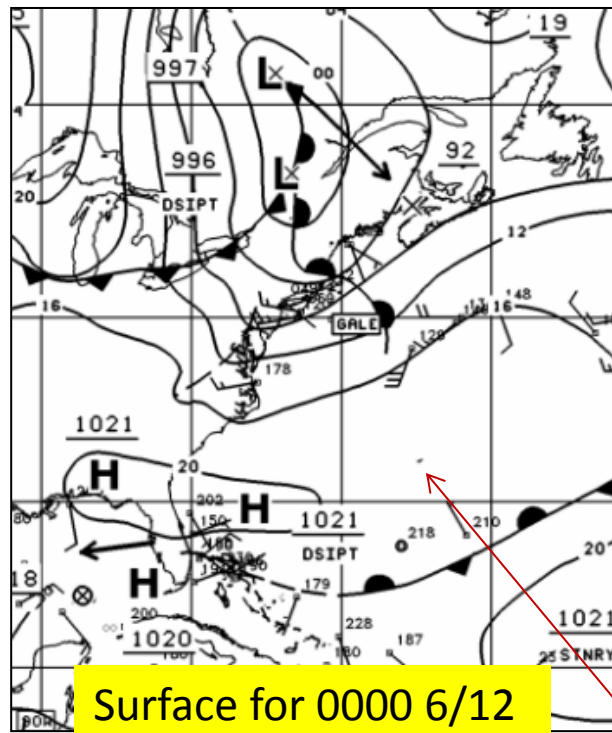

**Bradley Mabe: June 11, 2016
at 6:00:00 PM EDT**

6/11 - evening, winds N at 10.
Overnight, winds becoming NW 5
to 10. Continuing to back W then
SW by Sunday morning.

6/12 - Winds SW at 15 to 20
increasing to 25 with gusts to 30 in
the afternoon and evening
Overnight, a frontal system passing
brings rain and T-storms
The farther W you are the less the
front impacts you and the sooner
winds become N

6/13 - Winds SW to WSW at 20 to
25 rain and T-storms likely through
the day. Wind becoming N at 10 to
15 overnight

6/14 - Winds become W at 15 to 20

We had a beautiful sailing day today with lost of sun and 12 knots of wind. It was easy sailing and students took celestial shots. We had chicken soup for dinner and everything is fine.

We're in the middle of a gale now with 35 knots of wind. Everyone is doing well. We got Brad's report from last night. It's been pretty much right on, but with winds a little higher than that indicated. Midday today winds were 25 to 30 and they've been building toward evening and now we're getting 30 - 35. The waves are big but we have the mainsail reefed one reef and we have the jib down to a handkerchief size... it's pretty small, and we're actively sailing. We've reduced sail significantly in that manner in order to keep moving and control the direction of the boat relative to the waves. If I would heave to, I could not do that, I would be more or less subject to however the boat turns. So this is a relatively comfortable arrangement that we have. We are moving 4 knots relative to the water and it's controllable. There are no waves breaking into the cockpit. We get spray now and then, but no waves and it's all pretty manageable. Everybody has a positive attitude. We had beef stew for dinner. We washed dishes in fresh water tonight. We don't usually do that. We usually wash them in salt water but it was too rough tonight. I just came off watch along with Ron and I'm about to call it quits for the evening. Nordie and Samir are on right now.

It's going to be a long trip. With the forecast you just gave me for tomorrow with winds from the NW we're not going to be making distance to our destination. For the past 24 hours we've actually been sailing directly towards Norfolk but we're going to have to tack off when the wind direction changes and then it's going to go back to SW so we'll be able to cut back. In any event, we're plugging away.

June 12, 2016 at 5:43:15 PM EDT

6/12 - Evening - Wind SW 20 to 25 gusts to 30.

6/13 - Morning Wind SW 20 to 25 gusts to 30. At around 12Z (8AM EDT) a frontal system is indicated nearing your anticipated position from the NW. Rain and T-storms likely. After the frontal system passes 15z to 18z (11AM - 2PM EDT) winds become NW at 10 to 15 winds will back some overnight to the WNW.

6/14 - Winds WNW to W at 10 to 15

6/15 - Morning - winds W 10 to 15, afternoon - winds become WSW at 8 to 10 continue to backing SW 10 to 15 evening and overnight

No tropical storm activity noted.

Bradley Mabe: 6/13: 1800

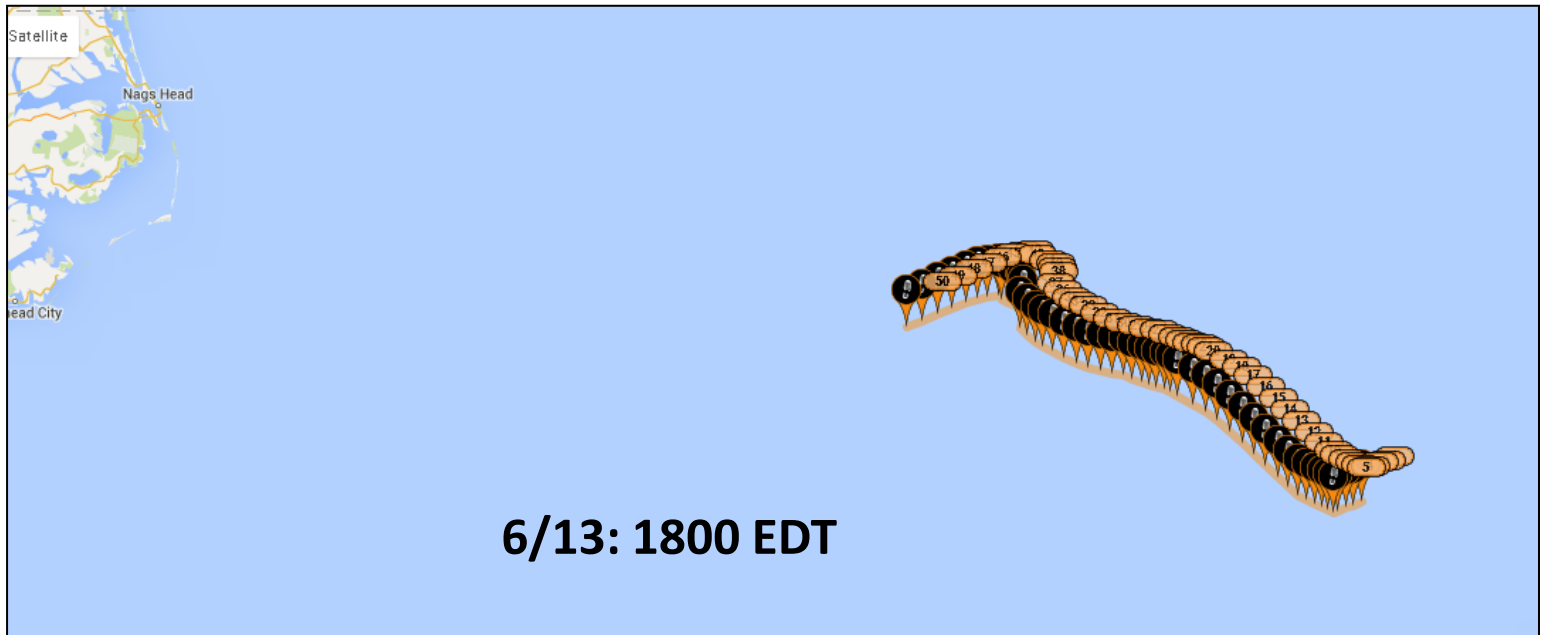

6:6/13 - Evening Winds NNW at 10 to 15 becoming WNW 10 to 12 overnight

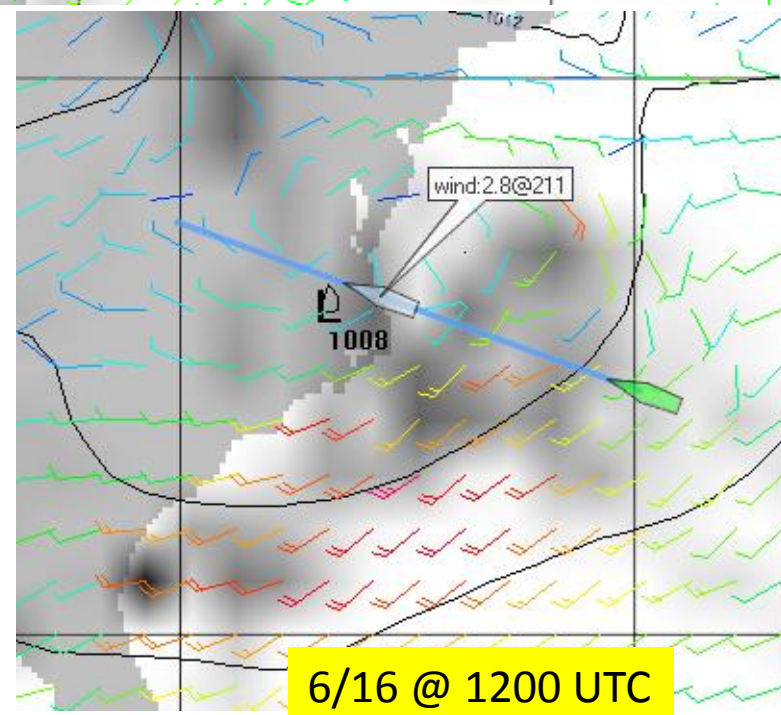

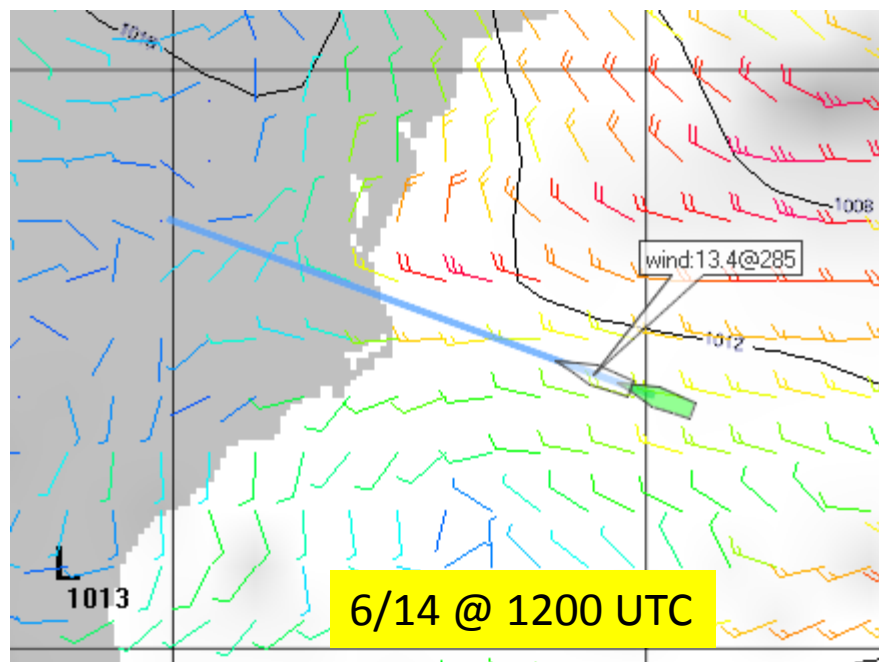

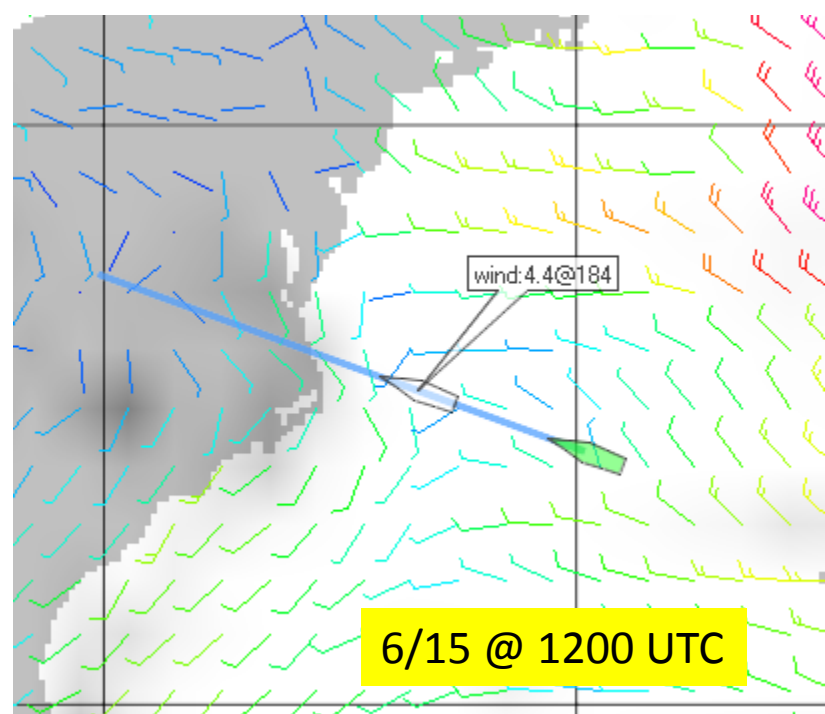

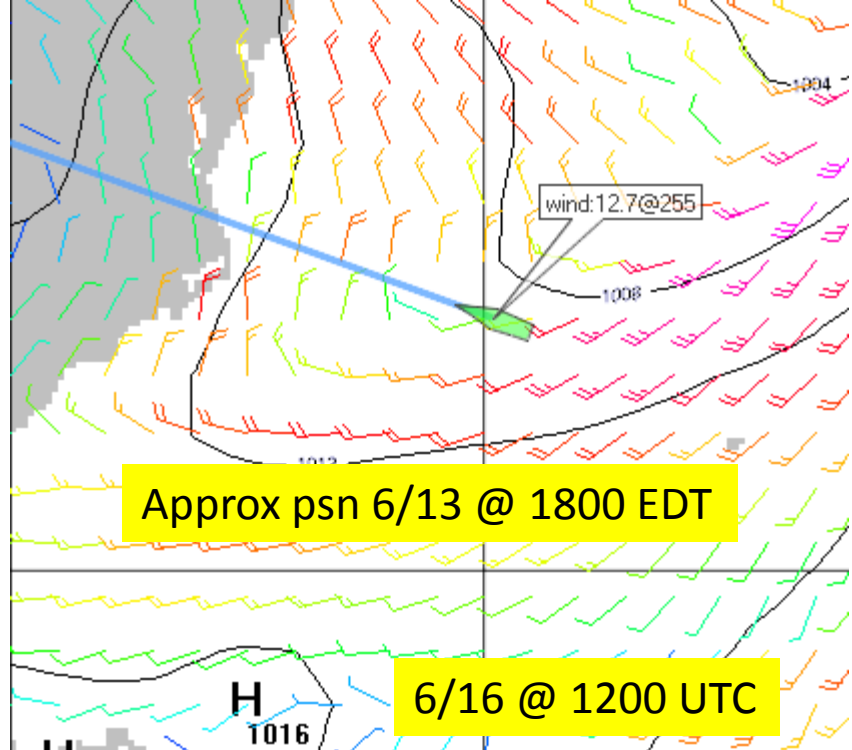

6/14 - Winds WNW 10 in the morning increasing to 15 late morning, becoming W at 10 to 15 early afternoon - becoming NW at 10 to 15 in the evening then light and variable overnight

New low pressure area forms just off the coast of N. Carolina along a stationary front - producing rain and showers and variable winds.

6/15 - Winds light and variable mostly from the W at 5 to 8 - evening brings increased chance of showers. Wind becoming SW 15 to 20 overnight

6/16 - Winds SW 15 to 20, rain and showers

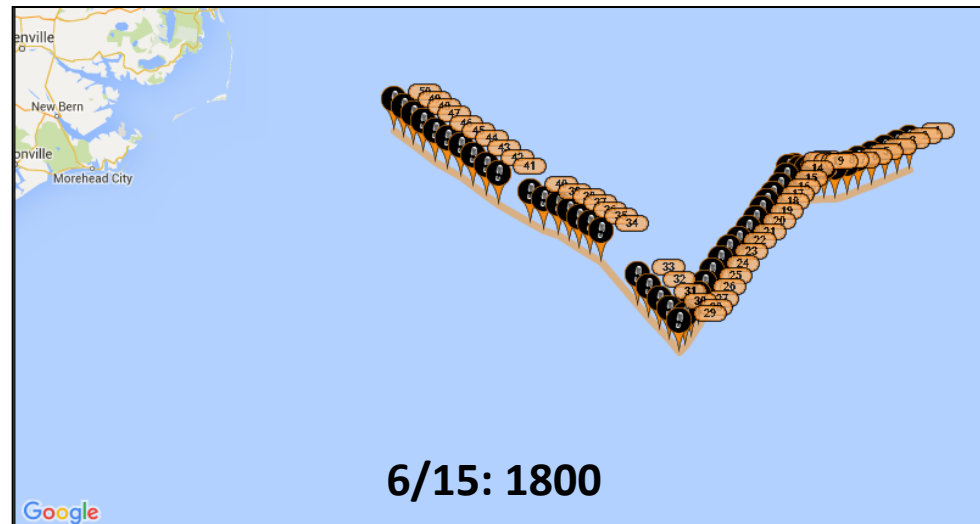

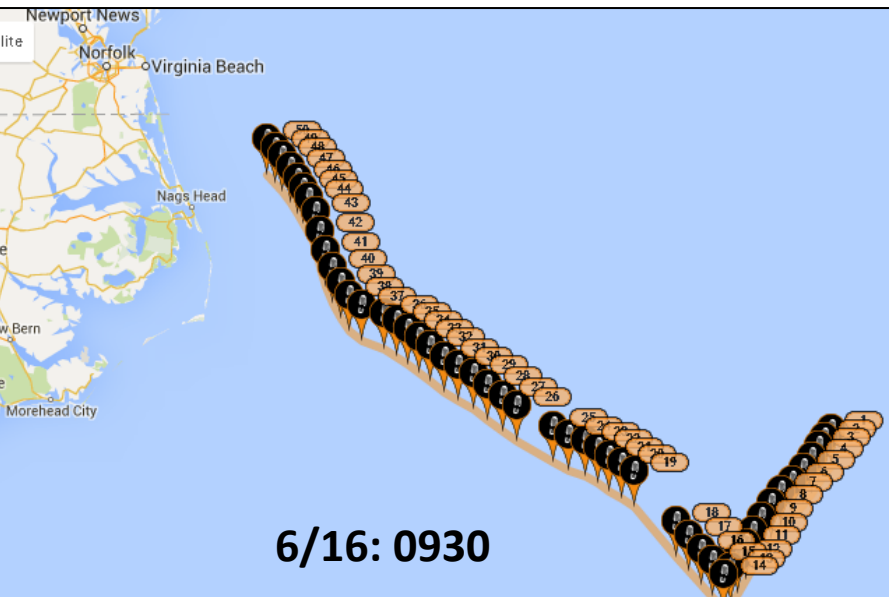

Bradley Mabe: 6/15: 1810 PM

6/15 - Evening - Winds - SSW at 10 increasing to SSW at 15 night increasing to SW at 20 by morning. Increasing chance of rain and T-storms overnight mainly after 9PM local

6/16 - Winds SW at 20. An area of Low pressure over the Mid Chesapeake bay moves ENE and continues to bring a threat of showers & T-storms. Afternoon and evening, winds back WNW at 10 as the low moves farther E. Overnight, winds become N at 5 to 7 then become ENE at 10 toward Morning.

6/17 - Winds - ESE at 10 to 15 becoming more NE as you approach the mouth of the Chesapeake Bay. Expect rain showers through the day. As another Low forms just off the NC coast

6/18 - Winds - NE at 20 to 25 Gusts to 30

Bradley Mabe: 6/16: 5:41 PM

6/16 - Evening - Winds E to ENE at 10 to 15. Tonight N to NW at 10 to 15 Becoming E to NE at 5 to 15. Waves 3 to 5 feet

6/17 - Winds E to SE at 15 to 25 becoming E 25 to 35

Gale warning beginning 4PM tomorrow afternoon
